Homework #7 **Math 527, UNH spring 2018**

Due Tuesday, April 3 in recitation.

Follow the usual instructions on homework submission: Be clear, legible, and organized. Write on loose-leaf paper. Staple together in the left-hand corner, write your name, section #, Math 527 HW6, and date in the upper-right-hand corner.

Problems 1-4: Find the Laplace transform or inverse Laplace transform as indicated.

1. $\mathscr{L}\{(3t+1)\mathscr{U}(t-1)\}$

2. $\mathscr{L}\left\{e^{2t}(t-1)^2\right\}$

3. $\mathscr{L}^{-1}\left\{\dfrac{2s+5}{s^2+6s+34}\right\}$

4. $\mathscr{L}^{-1}\left\{\dfrac{se^{-\pi s/2}}{s^2+4}\right\}$

Problem 5-6: Express the function $f(t)$ in terms of the Heaviside function $\mathscr{U}(t-a)$ and then find the Laplace transform $\mathscr{L}\{f(t)\}$.

5. $f(t) = \begin{cases} \sin t & 0 \le t < 2\pi \\ 0 & 2\pi \le t \end{cases}$

6. $f(t) = \begin{cases} 0 & 0 \le t < 1 \\ t^2 & 1 \le t \end{cases}$

Problem 7-10: Use Laplace transforms to solve the initial-value problems. If you like, generate plots of the solutions using numerical software like Matlab, Python, or Julia.

7. $y'' - 5y' + 6y = \mathscr{U}(t-1), \quad y(0) = 0, y'(0) = 1$

8. $y' + 2y = f(t), \quad y(0) = 0, \quad \text{where } f(t) = \begin{cases} t & 0 \le t < 1 \\ 0 & 1 \le t \end{cases}$

9. $y'' + 2y' + y = f(t), \quad y(0) = 0, \quad y'(0) = 1, \quad \text{where } f(t) = \begin{cases} 0 & 0 \le t < 3 \\ 2 & 3 \le t \end{cases}$

10. $y'' + 4y' + 5y = \delta(t - 2\pi), \quad y(0) = y'(0) = 0$
